Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1-22. (Canceled)
- 23. A method of forming a multi-layer structure for a display panel, comprising:

 forming a layer having a composition of intermixed first and second components,
 wherein the first component is different in color from the second component; and
 thereafter forming two substantially separate and distinct sub-layers within the
 layer, wherein a first sub-layer comprises the first component and the second sub-layer
 comprises the second component.
- 24. The method of claim 23, wherein the first component is darker than the second component.
- 25. The method of claim 23, wherein each component has a specific gravity, and wherein the two sub-layers are formed within the layer based on the specific gravity of each of the two components.

- 26. The method of claim 23, wherein the second component is Ag.
- 27. The method of claim 23, wherein the first component is a black powder.
- 28. The method of claim 23, wherein the first component has a specific gravity larger than 7, and the second component has a specific gravity smaller than 3.
- The method of claim 23, wherein said forming of two sub-layers within the layer further includes heating said two sub-layers.
- The method of claim 29, wherein said heating of said two sub-layers includes drying or firing.
 - 31. The method of claim 23, wherein the display panel is a plasma display panel.
- The method of claim 23, wherein the multi-layer structure is a sustain electrode of
 a plasma display panel.

- 33. The method of claim 23, wherein each component has a different specific gravity, wherein the difference is sufficient to cause separation of each component into its own sub-layer by gravity.
 - 34-53. (Canceled)
- 54. (Amended) The method of claim 31, wherein the multi-layer structure is a sustain electrode of the plasma display panel.
- 55. The method of claim 54, wherein the structure of the plasma display panel comprises:

a front substrate;

a rear substrate in parallel to the front substrate;

sustain electrodes on the front substrate:

an insulating layer on the sustain electrodes;

partitions formed between the front substrate and the rear substrate;

an address electrode on the rear substrate; and

a fluorescent layer within the partitions.

56-58. (Canceled)

59. A multi-layer structure for a display panel, comprising:

a layer having an initial composition of intermixed first and second components, wherein the first component is different in color from the second component, wherein each component has a specific gravity, and wherein two substantially separate and distinct sub-layers are formed within the layer based on the specific gravity of the first and second components.

- 60. The structure of claim 59, wherein the first component is darker than the second component.
 - 61. The structure of claim 59, wherein the second component is Ag.
 - 62. The structure of claim 59, wherein the first component is a black powder.
- 63. The structure of claim 59, wherein the first component has a specific gravity larger than 7, and the second component has a specific gravity smaller than 3.
- 64. The structure of claim 59, wherein the two sub-layers within the layer are formed by heating the layers.

Serial No. 10/644,757 Docket No. RPL-0010REI Reply to Office Action of <u>April 30, 2008</u>

65. The structure of claim 59, wherein the two sub-layers within the layer are formed by drying or firing the layer.

- 66. The structure of claim 59, wherein the display panel is a plasma display panel.
- 67. The structure of claim 59, wherein the multi-layer structure is a sustain electrode of a plasma display panel.
